

VERICEL

**Canaccord Genuity 2017
Musculoskeletal Conference**

March 14, 2017

Safe Harbor

This presentation contains forward-looking statements, including, without limitation, statements concerning anticipated progress, objectives and expectations regarding profitability, growth in revenue and earnings per share, cash payments, the commercial potential of our products, intended product development, clinical trial and regulatory plans and progress, objectives and expectations, all of which involve certain risks and uncertainties. These statements are often, but are not always, made through the use of words or phrases such as “anticipates,” “intends,” “estimates,” “plans,” “expects,” “we believe,” “we intend,” and similar words or phrases, or future or conditional verbs such as “would,” “should,” “potential,” “could,” “may,” or similar expressions. Actual results may differ significantly from the expectations contained in the forward-looking statements.

Among the factors that may result in differences are the inherent risks and uncertainties associated with competitive developments, clinical trial and product development activities, regulatory approval requirements, estimating the commercial potential of our products and product candidates and growth in revenues and improvement in costs, market demand for our products and our ability to supply or meet customer demand for our products. These and other significant factors are discussed in greater detail in Vericel’s Annual Report on Form 10-K for the year ended December 31, 2016, filed with the Securities and Exchange Commission (“SEC”) on March 13, 2017, Quarterly Reports on Form 10-Q and other documents filed by the Company with the SEC from time to time.

These forward-looking statements reflect management’s current views and Vericel does not undertake to update any of these forward-looking statements to reflect a change in its views or events or circumstances that occur after the date of this release except as required by law.

Vericel Investment Highlights

Vericel Investment Highlights	
Robust Specialty Biologics Business	<ul style="list-style-type: none">• Fully integrated specialty biologics business with strong revenue growth• Total Carticel® and Epicel® trailing 12-month revenues of \$54.4million as of Q4 2016<ul style="list-style-type: none">– 10% CAGR in revenue since acquisition
Near- and Long-Term Growth Drivers	<ul style="list-style-type: none">• MACI® BLA approved by the FDA on December 13, 2016 – potential to significantly expand cartilage repair franchise• Epicel HDE supplement approved in February 2016 – revised label includes pediatric patients and probable survival benefit; allows Epicel to be sold for profit• Ixmyelocel-T Phase 2b ixCELL-DCM trial for treatment of advanced heart failure due to ischemic DCM met primary endpoint – Fast Track designation granted February 16, 2017
Strong Shareholder Base	<ul style="list-style-type: none">• Closed \$20 million financing in December 2016• Participation by leading institutional healthcare investors
Experienced Management Team	<ul style="list-style-type: none">• Strong track record of developing and commercializing products in the U.S.• Deep experience in restructuring and integrating acquired businesses

Robust Product Portfolio

Overview – Articular Cartilage Structure and Function

Articular cartilage is a highly specialized connective tissue of synovial joints

- Articular cartilage function
 - Provides a smooth lubricated surface allowing nearly frictionless movement
 - Facilitates transmission of loads to underlying subchondral bone
 - Protect joints from compressive, tensile and shearing forces
- Hyaline cartilage is composed of dense extracellular matrix (ECM) of collagens, proteoglycans and H₂O
 - Chondrocytes are the resident cells responsible for the production, maintenance and repair of ECM

Articular Cartilage Defects and Treatment Goals

- Articular cartilage injury is a cause of significant musculoskeletal morbidity

- Cartilage defects are found in ~60% of knee arthroscopies
- Damage is caused by acute and repetitive trauma, degenerative conditions (OA) and inflammatory conditions (RA)
- Limited capacity for intrinsic healing and repair
 - Devoid of blood vessels, nerves, or lymphatics
 - Mature chondrocytes have limited potential for replication
- Untreated lesions may lead to debilitating joint pain, dysfunction, and osteoarthritis

- Treatment Goals: Reduce symptoms, improve function, prevent degeneration

Palliative	Reparative	Restorative
Techniques intended to relieve or prevent pain with little repair of underlying defect	Marrow-stimulation techniques that result in formation of fibrocartilage	Techniques designed to recreate hyaline-like cartilage at the site of the defect
<ul style="list-style-type: none"> • Lavage and debridement • Thermal chondroplasty 	<ul style="list-style-type: none"> • Microfracture/microdrilling • Augmented microfracture 	<ul style="list-style-type: none"> • Autologous chondrocyte implant • Autograft or allograft

MACI Overview

MACI is a 3rd generation autologous chondrocyte implant (ACI) for the treatment of cartilage defects of the knee

- First tissue-engineered autologous cellularized scaffold product approved by the FDA (December 2016)
- First tissue-engineered product approved as an Advanced Therapy Medicinal Product by the European Commission (June 2013)¹

Highlights of MACI Product Attributes vs. Carticel¹

	Attribute	MACI	Carticel
Label	Indicated Use ²	First-line treatment	Second-line treatment
	Defect Location ²	Cartilage defects of the knee	Femoral condyle only
Administration	Implantation procedure	Can administer via mini-arthrotomy	Arthrotomy
	Technical demands of implant procedure	Direct implantation of seeded cellular membrane	Suturing and injection
Clinical Data	Proven clinical efficacy and safety	Statistically significantly greater improvement compared to microfracture	No active control
Rehab Protocol	Rehabilitation	MACI Protocol	Standard ACI Protocol

¹ Saris et al., 2014; Vericel, 2015; Welsch et al., 2008; Bachmann et al., 2004; Marlovits et al., 2005.

² MACI PI; Carticel PI.

MACI Label Indications and Usage

1. Indications and Usage

MACI® (autologous cultured chondrocytes on porcine collagen membrane) is an autologous cellularized scaffold product indicated for the repair of single or multiple symptomatic, full-thickness cartilage defects of the knee with or without bone involvement in adults.

Limitations of Use

- Effectiveness of MACI in joints other than the knee has not been established.
- Safety and effectiveness of MACI in patients over the age of 55 years have not been established.

	MACI Label
Indicated Use	First-line treatment
Defect Location	Cartilage defects of the knee, including patella
Defect Size	No limitation
Number of Defects	Single or multiple
Bone Involvement	With or without bone involvement

MACI Administration Advantages

CARTICEL

Effective in a challenging patient population

- Moderate to large sized chronic, symptomatic lesions that have failed a primary treatment

Limitations:

- Technically exacting procedure requiring arthrotomy, periosteal patch harvest and sutures
- Extended surgical time

MACI

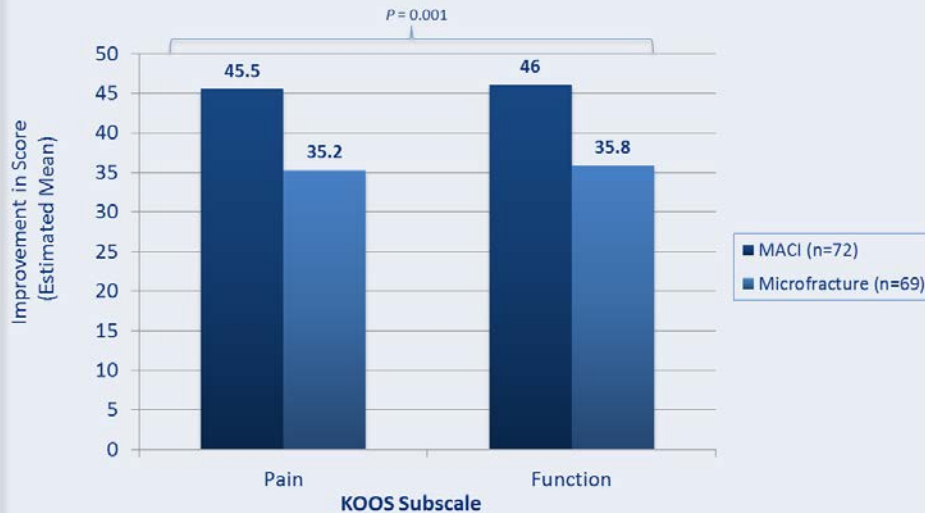

3rd generation ACI

- Less invasive ACI
- Easier administration
- Eliminates periosteal harvest and sutures
- Significant reduction in surgical time
- Uniform distribution of cells
- Improved post-operative course

SUMMIT (Superiority of MACI Implant Versus Microfracture Treatment) Clinical Study Results¹

Overall efficacy data support a long-term clinical benefit from the use of MACI in patients with cartilage defects of the knee

KOOS Pain and Function Endpoints at Year 2

MACI demonstrated statistically significantly greater improvement in KOOS pain and function (SRA) scores compared to microfracture at year 2

Responder Rate*

*Defined as at least a 10-point improvement from baseline in both pain and function [SRA] scores

The Responder Rate of patients at year 2 was statistically significantly greater with MACI vs. microfracture

- In a three year follow-up study, the mean two-year KOOS pain and function scores remained stable for the additional three-year period
- The most frequently occurring adverse reactions (>5%) for MACI were arthralgia, tendonitis, back pain, joint swelling and joint effusion

¹The American Journal of Sports Medicine (2014) 42(6), 1384-1394.

MACI Rehabilitation Protocol

Rehabilitation Timelines for ACI procedures: Time to Weight-Bearing¹

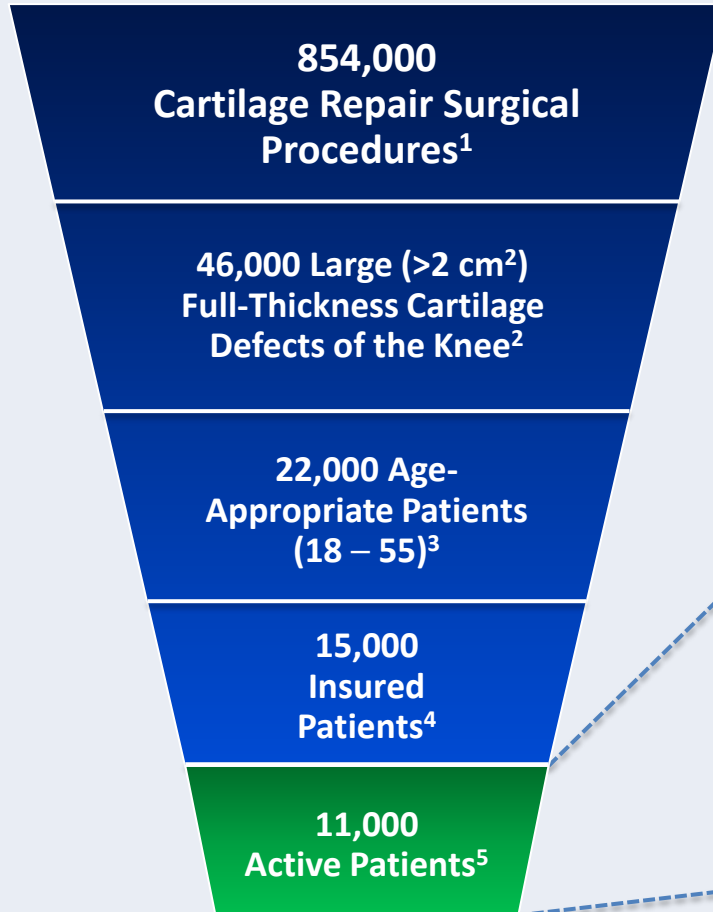

¹Ebert J et al, Osteoarthritis & Cartilage 2008; Edwards PK et al, AJSM 2013

Published MACI rehabilitation protocols achieve full weight-bearing in 6-8 weeks compared to 10-12 weeks for published Carticel rehabilitation protocols

MACI Strategic Investments

- Expanded Commercial and Medical Affairs Team
 - Expanded Sales Regions and Area Sales Directors from two to four
 - Expanding Sales Territories from 21 to 28
 - Adding a dedicated in-house sales trainer, Market Access Director, and MSL to support expected growth in customer base
- Enhanced Patient and Customer Support Programs
 - Train-the-Trainer Program
 - Leading European and Australian KOLs with extensive MACI experience are conducting speaker training and leading a bioskills lab with top U.S. KOLs
 - In-person and state-of-the-art online surgeon training tools and apps
 - MACI.com website
 - MyCartilageCare healthcare provider website
 - Interactive visual aid and resources – digital tool box
 - Payer support – Account Executive Team, Budget Impact Model

MACI FOR PHYSICIANS

MACI FOR PATIENTS

**MACI REPAIRS CARTILAGE
USING A PATIENT'S OWN CELLS.**

INDICATION

MACI® (autologous cultured chondrocytes on porous collagen membrane) is an autologous cultured scaffold product that is indicated for the repair of large or multiple symptomatic, full-thickness cartilage defects of the adult knee, with or without some meniscus.

MACI is intended for autologous use and must only be administered to the patient for whom it was manufactured. The implantation of MACI is to be performed via an arthroscopy to the knee joint under sterile conditions.

The amount of MACI administered is dependent upon the size (surface area) of the cartilage defect. The indication of MACI is limited by the treating surgeon to the size and shape of the defect. To ensure the damaged area is completely covered, an implant is cut to size (only).

Limitations of Use

Effectiveness of MACI in parts other than the knee has not been established.

Safety and effectiveness of MACI in patients over the age of 55 years have not been established.

IMPORTANT SAFETY INFORMATION

MACI is contraindicated in patients with a known history of hypersensitivity to gelatin, other glycoproteins, or products of canine or bovine origin. MACI is also contraindicated for patients with severe cardiovascular or renal disease, or uncorrected congenital blood coagulation disorders. MACI is also not indicated for use in patients who have undergone prior knee surgery in the past 6 months, including surgery to procure a sample or a concomitant procedure to prepare the knee for a MACI implant.

MACI is contraindicated in patients who are unable to follow a physician-directed post-surgical rehabilitation program.

The safety of MACI in patients with idiopathic or the lack of cartilage body or impact trauma, isolation of osseous malignant or dysplastic cells during the curing process or implantation is unknown.

Patients undergoing procedures associated with MACI are not routinely tested for transmissible spongiform encephalitis. A cartilage biopsy and MACI implant may carry the risk of transmitting infectious diseases to healthcare providers handling the tissue. Universal precautions should be employed when handling the tissue samples and the MACI product.

HCP Brochure

autologous cultured chondrocytes on porous collagen membrane

MACI is the first autologous cultured scaffold for the repair of cartilage defects of the knee.

MACI simplifies autologous chondrocyte implantation (ACI)^{1,2}

- MACI consists of autologous cultured chondrocytes on absorbable porous collagen membrane
- No ACI ACI system required
- Cartilage harvest is optional
- Cartilage implant is optional
- No need for ACI ACI system
- Lower risk of disease transmission

Epicel Overview

Epicel is a permanent skin replacement for full thickness burns $\geq 30\%$ of total body surface area

- Only FDA-approved autologous epidermal product available for large total body surface area burns
- Important treatment option for severe burn patients where little skin is available for autografts
- Approved as a Humanitarian Use Device in the United States
- FDA approved HDE Supplement to revise label to specifically include pediatric patients (February 2016)

Epicel[®] **(cultured epidermal autografts)** **HDE# BH990200**

Directions for Use

HUMANITARIAN DEVICE: Authorized by Federal law for use in adult and **pediatric patients** who have deep dermal or full-thickness burns comprising a total body surface area greater than or equal to 30%.

Epicel[®] may be used in conjunction with split-thickness autografts, or alone in

Epicel may now be sold for profit on up to 360,400 grafts per year (>50X 2015 volume)

CLINICAL STUDIES

The probable benefit of Epicel[®], mainly related to survival, was demonstrated in two Epicel databases and one physician-sponsored study, as shown in Table 3, Table 4, and Table 5.

Vericel may now communicate the probable survival benefit of Epicel in all age groups to physicians

Large Addressable Burn Therapy Market for Epicel

¹ 2012 National Burn Repository Report Version 8; 2013 National Burn Repository Report Version 9; 2014 National Burn Repository Report Version 10.

² Assumes 600 patients x 1.25 (25% re-order rate) x 67 grafts per order x \$2,354 per graft.

Epicel Strategic Investments

- Expanded Commercial and Medical Affairs Team
 - Expanded to five sales representatives and a dedicated Regional Sales Director
 - Hired a dedicated MSL
- Enhanced Patient and Customer Support Programs
 - Comprehensive peer-to-peer programs including Advisory Boards, Fellowship Programs and Medical Programs
 - Enhanced training and reimbursement support
 - Increased presence through sponsorships, publications, and public relations campaigns

Strong Total Revenue Growth In the Core Commercial Business

- LTM revenue = \$54.4 million
- 10% CAGR in revenue since the acquisition of Carticel and Epicel

Strong Total Revenue Growth Rate In the Core Commercial Business

- Variable growth rate – quarter vs. prior year quarter growth ranges from -4% to 31% due to seasonality and specialty biologics business model
- Rolling four-quarter growth rate between 7% and 20%

- Gross margins of 48% for trailing four quarters
 - Margins are expected to continue to improve as volumes increase given low marginal costs and existing capacity
- Operating profit expected to increase as ixmyelocel-T development costs decline
 - ~\$5 million of direct internal and external R&D expense in 2016 were due to ixCELL-DCM study costs
- Cash balance of \$23 million as of December 31, 2016
 - \$20 million financing closed on December 21, 2016
 - \$10 million A/R facility and \$10 million term loan with SVB and MidCap Financial (\$8 million utilized as of Q4 2016)

Ixmyelocel-T is a Highly Differentiated Multicellular Therapy With a Scalable GMP Manufacturing Platform

Bioreactor

The top image shows a clear, circular bioreactor cassette with internal structures. The bottom image shows a person in a white lab coat, hairnet, and mask, working in a GMP manufacturing facility, handling a tray of bioreactor cassettes.

- Automated, Fully-Closed GMP System
 - Single-use disposable bioreactor cassette
- Scalable Modular Expansion
 - Enables COGS < 10% at commercial scale

Ixmyelocel-T for Treatment of Advanced Heart Failure Due to Ischemic DCM – Fast Track Program Designation

Patient Profile

- Majority of patients that are refractory to medical therapy have ischemic dilated cardiomyopathy (DCM) (~150,000 patients)
- Maximized Rx and device therapy and typically no longer candidates for revascularization procedures
- Only remaining options are LVAD or heart transplant

Phase 2b ixCELL-DCM Study Design

Objectives	<ul style="list-style-type: none"> • To evaluate the efficacy, safety and tolerability of ixmyelocel-T compared to placebo in patients with heart failure due to ischemic DCM
Patients	<ul style="list-style-type: none"> • Diagnosis of ischemic DCM according to WHO criteria • Males and females, age 30-86 • LVEF \leq 35% • NYHA class III or IV heart failure
Design	<ul style="list-style-type: none"> • Multicenter, randomized (1:1), double-blind, placebo-controlled phase 2b study • 108 patients at approximately 35 sites in the US and Canada • Administration via catheter injection into the left ventricular endocardium using the NOGA® Myostar® injection catheter (Biosense Webster)
Primary Endpoint	<ul style="list-style-type: none"> • Number of all-cause deaths, cardiac hospitalizations, and unplanned outpatient/ emergency department visits for IV treatment of acute worsening heart failure over 12 months
Status	<ul style="list-style-type: none"> • Results presented at the Late-Breaking Clinical Trials session at ACC and published in <i>The Lancet</i>

ixCELL-DCM Clinical Trial: Primary Efficacy Endpoint

Patients treated with ixmyelocel-T had a 37% reduction in events compared to placebo

Phase 2b ixCELL-DCM Clinical Trial Results: Selected Secondary Efficacy Endpoints

Secondary endpoints favored ixmyelocel-T, but differences were not significant

ixCELL-DCM Trial Results Published in *The Lancet*

Appendix

Management Team with Deep Operations and Commercialization Experience

Management Team

Nick Colangelo – President & CEO (March 2013)

- More than 20 years of executive management and corporate development experience
- Nearly a decade with Eli Lilly, including serving as Director of Strategy and Business Development for Lilly's Diabetes Product Group and founding Managing Director of Lilly Ventures
- Extensive experience in the acquisition, development and commercialization of therapies to treat fibrovascular, metabolic and CV diseases

Gerard Michel – Chief Financial Officer and Vice President, Corporate Development (June 2014)

- More than 20 years in the life science industry including large pharma (Lederle Labs, Wyeth Labs), biotech (NPS Pharmaceuticals, Biodel) and management consulting (Booz Allen) with meaningful experience across all major functional and therapeutic areas
- Raised significant amount of capital via strategic, equity, debt, and royalty deals

Daniel Orlando – Chief Operating Officer (August 2012)

- More than 20 years of sales, marketing, and business development experience, most recently serving as Vice President of business development for North and South America at Takeda
- Extensive commercial experience in cardiovascular, diabetes and metabolic disease areas
- Original brand director for Actos

David Recker, M.D. – Chief Medical Officer (April 2014)

- More than 20 years of drug development experience, most recently as Senior Vice President for Clinical Science at Takeda Global R&D
- Responsible for multiple programs in a variety of therapeutic areas, including cardiovascular, diabetes, and metabolic disease areas
- Numerous successful regulatory filings throughout the world
