When prompted on the phone, the Account # is: 286, and the Conference ID# is: 252325.

Aastrom is a regenerative medicine company developing autologous cell products for the repair or regeneration of bone, vascular, cardiac and neural tissues, based on its proprietary Tissue Repair Cell (TRC) Technology. Aastrom's TRC-based products contain a unique cell mixture of stem and early progenitor cells, produced from a small amount of bone marrow collected from the patient. TRC-based products have been used in over 250 patients to date and are being clinically evaluated for bone regeneration as a result of osteonecrosis of the femoral head (U.S.: ON-CORE Phase III trial and Spain: pivotal trial), and vascular regeneration related to critical limb ischemia (U.S.: RESTORE-CLI Phase IIb trial and Germany: Phase I/II trial). Aastrom has recently completed a U.S. Phase I/II severe fracture clinical trial, and is also developing programs to address cardiac and neural regeneration indications. TRC-based products have received Orphan Drug Designation from the FDA for use in the treatment of osteonecrosis of the femoral head and the treatment of dilated cardiomyopathy, a severe chronic disease of the heart.
